To whom it may concern:

The sun shines + fossil fuels are being exhausted + the government pays us to produce our own solar energy = an obvious choice!

We had been putting off making the choice, but when a friend had her pv panels installed by Affordable Solar Energy, we started looking seriously at it.

We thought we had too many obstacles: we live in a housing trust area; we have no rear access

to our property (and the panels would go on the rear roof); we have two velux windows in the roof. Yet the installers worked around all those things.

I was amazed at how efficient the installation was, and delighted to watch our electricity meter running backwards before the lovely installer had even left.

Bring on the sun!

Kathryn Knight
