Dear Sirs,

Letter of recommendation

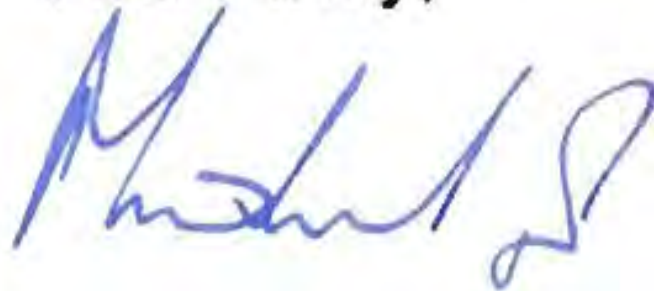

My Wife and I were interested in exploring the possibility of having PV solar panels installed on our property. A representative from Affordable Solar Energy called on appointment, explaining the options and costs in early August 2010, and we decided to go ahead.

Within a few days an appointment was made for a site surveyor to visit, and by mid September the panels were fitted. Installation was completed in half a day. At 8:00 am an electrician came and started the internal installation of cables meter and inverter, and a short while later the external installers arrived and fitted the panels. The whole operation was quick, clean and efficient.

The system has now been installed for approximately 6 and a half months, and largely over the winter period. Our 3kw system has produced some 1200kw since installation, a considerable offset on our utility bills. During the sunny days over Easter and the May bank holiday the system has been producing an impressive 18kw per day.

Both myself and my wife are extremely happy both with the performance of the system and also the professional approach of Affordable Solar Energy and their employees. I would not hesitate to recommend the technology and company to other interested persons.

Yours truly,

Michael John
