

Testimonial

We have recently had a solar thermal energy system installed to provide heating for our outside swimming pool. We are thoroughly enjoying the benefit of free additional heating which makes our pool both enjoyable and economic, and extends the season both in the spring and autumn. As gas prices increase the value of the energy provided by our panels also increases, making this a very worthwhile investment. It is reducing our annual household expenditure as well as adding value and saleability to our property. We also take pleasure in knowing that we are reducing our carbon footprint substantially. We would thoroughly recommend Affordable Solar Energy.
