Dear Mr. Jackson,

My Affordable Solar System has now been operational for a week and my initial impressions are very favourable.

I responded to your mail shot after some thorough research of installers on the Internet. I am, by nature, somewhat sceptical of sales persons presentations but was pleasantly surprised by the professionalism and technical knowledge of Jon Wilson on his visit to my home.

My main reason for selecting Affordable Solar for my system was your extensive experience in the field and your choice of top of the range components. I definitely try to avoid companies who try to keep prices down by cost cutting on important items.

I researched the government FIT scheme in some depth before Jon's visit and was

pleased that his presentation was able to clarify some uncertainties in my understanding of the scheme.

Although I have only 1 week's experience, and most of that in sunny weather, it certainly looks as if the generation rate will fulfill expectations - over 100 kWh in 7 days to date!

On the financial side, the value of my investment on my roof is undoubtedly much better than cash in the bank earning a miserly 3.1% taxable - and I am looking forward to my quarterly cheques and to reductions in my electricity (and gas) bills.

I anticipate being able to write to you again in 6 months time to confirm that the system fulfills its initial promise.

Yours sincerely

J Shaidler
