Camborne

To whom it may concern,

Most households are interested in reducing their electricity bills & that was our initial interest in solar energy. On hearing of the government tariff scheme at this present time gave us an added interest as money could be invested in the panels & have a good return.

The reason we chose Affordable Solar Energy was we believed & were told they used the best quality of solar panels & this was borne out by one of the "sub-contractors" who fitted them. Unsolicited he informed us that although they work for different companies, the best company to work for is Affordable Solar Energy, because they used the best quality panels & are the most efficient, organised & helpful of all the companies. We think that says it all.

Yours sincerely

Roberts
