Dear Sir / Madam,

As a teacher of climate change in schools, I am well aware of my need to 'walk the talk' and reduce my carbon footprint.

I took the plunge by having 21 PV units installed on my roof by Affordable Solar Energy. What a difference! I am only sorry that I didn't have it done any sooner!

The installation was so efficient that after a mere 4 1/2 hrs the units were in and working. The night of the installation, I had the hottest bath I have ever had in 17 years of living at my house. It was amazing.

As much hot water as I can handle, money back from the Energy Companies as my units produce power for the National Grid and I get to reduce my carbon footprint. What more could anyone want!

More people need to use solar power and I am busy spreading the word. The best thing is, it really is AFFORDABLE!!

Yours faithfully

A. Stacey
