From: Peter 325A Road RUSHDEN NN To: [Affordable Solar Energy]

19th July, 2010

Gentlemen:

I've just received my first 3 monthly payment for electricity generated by your installation at the above address, and attach EON's payment notification.

I think we can reasonably expect a similar sum for the coming 3 months, so that in 6 months the system will have paid us slightly more than our historic **annual** energy bill of ca. £1000. Our expectations are that the winter months' generation [howsoever small] will represent pure profit!.

And of course, our regular electricity bill for future periods will be smaller than in the past, because we're using our own generated electricity during the hours of daylight. Of course we don't yet know how big the reduction will be, but every little helps as they say.

The bottom line is that we're VERY content that we decided to install the photovoltaic system. It's set to turn our house into a "Zero Energy Cost" building - with profit to boot!

Please accept our thanks for your valued assistance in achieving this happy outcome. You must feel free to use this message & attachment with any future prospective customers who may have doubts about the value of a photovoltaic system.

With best personal regards,

Peter
