

AFFORDABLE SOLAR ENERGY- CUSTOMER ORDER NUMBER

I have always been interested in reducing my personal carbon footprint and thus helping to create a safer environment for future generations. In 2004 I invested in a Solar Hot Water System and this year I have again invested in a Solar PV System which allows me to generate my own electricity.

In availing of the Solar PV System the government will pay me a Feed-in-Tariff of 41.3 pence for all units of electricity generated, whether I use them or not and any unused are automatically passed on to the national grid which pays an extra 3p per unit. These tariffs are guaranteed from 01 April 2010 for 25 years and are both tax-free and index linked to inflation during that time.

This financial incentive from the government was sufficient to convince me of the overall merits of the Solar PV System, which will allow me to

1. Save over a tonne of CO₂ emissions per year
2. Cut my energy bills by 60%
3. Safeguard against rising energy bills
4. Receive approx. £1000 or more per year from feed-in –tariffs, which is tax-free and index-linked for 25 years – a good investment
5. Receive additional payments from national grid
6. Increase the value of my property – any new owner will inherit the 25 year FITs and reduced energy costs

I personally used Affordable Solar Energy for the installation of my solar system and found them most meticulous and thorough throughout, from the first appointments with their Marketing Consultant and Surveyor to the final installation, all of which was completed to my satisfaction within 3 months. I can unequivocally recommend them.
